Rich Mille RM 50-04 Tourbillon Split-Seconds Chronograph Kimi Räikkönen

Two days before the start of the Singapore Formula One Grand Prix, on September 18, 2019, Richard Mille (Richard Mille) demonstrated a fascinating novelty—a tourbillon and split chronograph Practical exquisite high-end [swiss movement replica watches](#). It had been created in memory associated with experienced racing driver Kimi Räikkönen and his Alfa Romeo racing team.

The Singapore Grand Prix will tag the 307th game from the Finnish athlete known as the actual " Iceman ". Before us, it has an impressive model of sports living: 18 years of professional profession, Kimi Räikkönen (Kimi Räikkönen) has won 103 competition, 21 of which stood within the highest position. So far, the particular athlete is the most famous Finnish racer in Formula 1.

From now on, Kimi will wear typically the RM 50-04 tourbillon minute-second chronograph on the track. Within the manufacturing of this exclusive manual-winding view, grade 5 titanium as well as TPT®-carbon weighing only seven grams were used. The text between the tourbillon and the divided chronograph requires a detailed research of the mechanism of energy move. The need to reduce friction among parts has led to the development of enhanced versions of the "teeth" in the reel and pinion, which improves the torque. [richard mille rm 11-03 mclaren flyback chronograph](#)

The spectacular timing device is designed inside the color of a single racing C38. The bezel and back again cover made of TPT®-quartz tend to be white. In the process of making this fabric, 600 layers of si with a thickness of just 45 microns were impregnated with a white substrate and also baked in an autoclave in 120°C.

This technology can perform the best abrasion resistance and lightweight ratio, providing materials along with hypoallergenic and UV opposition. The case (44. 50 by 49. 65 x sixteen. 10 mm) of the brand new high-end watch uses exactly the same technology and is made of TPT®-carbon. In the wonderful Richard Innumerevoli timepiece, the combination of red and white can be found on the rubber band of this model. Red home decor are also used on the internal visor, chronograph, power reserve and watch working mode indicators. On the switch made of grade 5 ti, the number "7" stands out like a reference for Räikkönen's quantity. The model has been examined and can withstand up to 5000G overload. Raikkonen himself said to the new type of the Richard Mille brand name that became an military attache in 2018: "We are usually known in Finland for the courage and determination. We also have a word called "sisu". However are a lot of difficulties, which nevertheless made us cross the

conclusion line. However, in my sports activity, *sisu* is not enough. I must rely on high-performance technology along with team spirit-since joining often the Alfa Romeo Racing Group, I have been very Appreciation. Most of all, there must be pure passion! Rich Mille has been relying on these types of three aspects to energy his engine for many years-guts, technical ability and most significantly fun. This is Why I am therefore happy to wear the success RM 50-04 on my hand. "

Richard Mille-RM 50-04 Tourbillon Minutes and Seconds Chronograph Kimi Raikkonen (Kimi Raikkonen)

On the occasion on the upcoming Singapore Formula One particular Grand Prix on Sept 22, Richard Mille (Richard Mille) will launch the actual RM 50-04 tourbillon minute-second chronograph Kimi Raikkonen together with partners. [replica watches best](#)

With this new exclusive watch, the Swiss brand will pay tribute to the F1 globe champion driver and his present driver Alfa Romeo Race Team.

The RM 50-04 movement developed for this product is extremely sophisticated, with a split-second tourbillon tourbillon and a quality 5 titanium and graphite TPT movement. It weighs in at only 7 grams because of its exquisite skeleton.

In order to mix these complexities in one system, perfect energy transmission is needed to ensure trouble-free operation. The necessity to reduce friction prompted the study team to improve the tooth user profile on the barrel and 2nd pinion.

This high-tech motion is equipped with the latest generation regarding seconds hand mechanism produced by the engineer of Rich Mille. [replica audemars piguet price](#)

The new column steering wheel can operate the different redressers of the second hand function in addition to optimize the operation with the chronograph. The previous Richard Infiniti chronograph traditionally used 8-row wheels, while the one built with RM 50-04 now simply has 6 columns to make sure optimized simultaneous movement, optimum function lock and larger The actual adjustment durability.

The case steps 44. 50 x forty-nine. 65 x 16. ten mm, made of quartz TPT and carbon TPT, as well as uses the same color since the Alfa Romeo C38 single-seater sedan. The unique appearance from the white Quartz TPT materials is achieved by placing 600 layers of forty five micron thick silicon levels and immersing them in a white-colored matrix, and then heating these to 120°C in an autoclave. This

method allows the material to have a higher resistance/weight ratio, nonallergenic attributes and excellent UV level of resistance. [cheapest replica watches](#)

The particular technology was developed by To the north Thin Ply Technology and it is used for carbon TPT advanced materials, but this time it utilizes carbon fiber.

The red replicate can also be seen inside the movements, especially on the carbon fiber TPT flange, chronograph and reserve of power, torque and function indicators.

Typically the fifth grade titanium call also includes No . 7, that is worn by Kimi throughout the competition. The combination of these kinds of technical solutions provides outstanding resistance to this complex component, which has been internally tested and may withstand an impact of five, 000 grams.

The 70-hour power reserve indicator at eleven o'clock is visually well balanced with the torque indicator from 2 o'clock. The torque indicator provides information about the pressure of the mainspring, thereby enhancing the chronograph function in the movement. When it is lower than 53 Nmm (Newton millimeters), the particular spring is considered to be too reduce; when it is higher than 65 Nmm, the excessive tension from the spring will adversely impact the operation of the mechanism, and may endanger the operation on the mechanism.

In a way similar to a vehicle gearbox, the function indication at 4 o'clock enables you to check the positions of the mainspring (W), neutral (N) and also hand setting (H) once the crown is pulled out.

Rich Mille (Richard Mille) RM 50-04 Tourbillon Minutes along with Seconds Chronograph Kimi Raikkonen (Kimi Raikkonen) has 2 Nitril O-rings and is water-repellant to 50 meters or 165 feet. [replica harry winston opus 12](#)
